

**ArmelinWidget**  
A Passion For Invention

Product: Armelin Widget SmartStick 100

Solution: - Meet DOD DAR requirements  
- Comply with Army, Navy, Air Force  
and Marine Corp policies

## GuardianEdge and Armelin combine to fully comply with requirements for USB flash memory usage under the Department of Defense Data at Rest initiative (DAR) as well as Army, Navy, Air Force and Marine Corps policies

When using USB flash devices, organizations with access to protected classes of U.S. Government information must comply with the United States Department of Defense Data at Rest initiative (DAR) – a set of policies designed to protect sensitive government information stored on computing devices. In addition, they may also be required to comply with USB flash drive usage policies from the Navy, Army, Air Force and Marine Corps.

GuardianEdge is a leading provider of mobile data protection software to the U. S. Federal Government, with policy-based controls for encryption, monitoring, connection and auditing designed to ensure compliance with these initiatives. Armelin Widget complements the GuardianEdge solution with the only devices to meet all of the physical policy requirements of DAR as well as additional initiatives from defense organizations.

### Armelin SmartStick 100

- The only USB flash devices to fully meet physical and electronic requirements for DOD DAR as well as Army, Navy, Marine Corps and Air Force policy
- High performance to allow encryption and decryption of large files with minimal performance loss
- Designed to be physically tough and environmentally friendly to satisfy the needs of government and defense contractor organizations

### GuardianEdge

The Leader in Endpoint Data Protection

- Encryption of data on hard disks, portable media and portable devices as well as smartphones
- Wireless and physical port, device and file type controls for PCs and smartphones
- Enterprise-class, scalable, policy-based management, auditing and reporting closely integrated with Microsoft Active Directory

**ArmelinWidget**  
A Passion For Invention

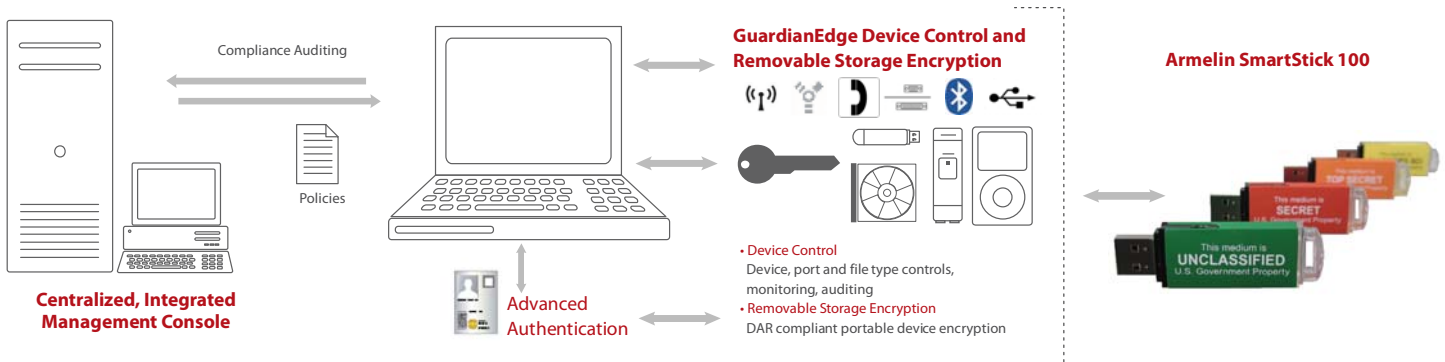

**Armelin Widget** provides the only USB flash devices that are fully compliant with these usage mandates. – SmartStick 100 USB flash drives:

- **Meet DAR requirements** – a unique, digital serial number for each device, classification level digital part number, and ultra high speed to support encryption requirements
- **Comply with Army, Navy, Marine Corps and Air Force policies** – Labeling, color coding, physical write protection switch presence, aluminum enclosure with potted circuits for tamper protection and tamper evidence, physical serialization, electronic serialization and more

## GuardianEdge

**GuardianEdge** completes the solution – Providing products with policy-based controls, monitoring, auditing and DAR approved, FIPS 140-2 validated, encryption.

- **GuardianEdge Device Control** –Restricts use to approved devices with policy-driven port and device controls. Extends protection with file type controls that restrict file transfers to approved file types, as well as the detailed monitoring, auditing and reporting required for compliance.
- **GuardianEdge Removable Storage Encryption** – Protects data written to portable devices with DAR approved, flexible, policy-driven encryption. Enables secure, administrator assisted recovery from lost passwords.
- **GuardianEdge Advanced Authentication** – Protects access to encrypted data on removable devices using federally issued authentication certificates (such as SmartCards / CAC cards).
- **The GuardianEdge Data Protection Platform** – Supports GuardianEdge applications by providing a complete, policy-driven environment that is centrally managed from a single console, natively integrated with Microsoft® Active Directory® and also supports Novell eDirectory™ and non-domain endpoints for the most cost-effective protection of critical mobile data. In addition, client software is tamper resistant for added protection; detecting, logging and preventing attempts to remove or change the software by end users.
